### Empathize & Discover

During the Empathize phase, I focused on understanding the challenges faced by students and librarians in the existing library book request process. I observed that students often experience delays while requesting books due to the manual submission process and have no easy way to track their requests. Librarians also spend considerable time maintaining records manually, which can lead to errors and inefficiency.

To address these issues, I identified the need for a simple and automated system that enables students to request books online. The proposed Library Book Request System allows students to submit book requests easily, automatically generates a unique request number, validates that the issue date is not in the past, and sends an email notification to the librarian whenever a new request is submitted. This solution improves efficiency, reduces manual effort, enhances accuracy, and provides a better experience for both students and librarians.
